

## Question: How do I control OSD/PTZ cameras with a combo cable?

**Answer:** A combo cable can transmit video, data and power through a single cable, saving time, money and hassle with your CCTV installation.

## CONTROL OSD/PTZ CAMERAS WITH COMBO CABLE

PTZs require a power supply, a way to transmit video as well as data input from a keypad to control it. This sounds like a lot of cabling but by using combo cable you can do all 3 of these through one cable! By doing so it saves you installation time and material costs as well as saving you the hassle of running out and fixing three cables!

Our PTZ Combo Cable contains 2 power cores that carry a 12V or 24V power to the camera, colour coded data cores for transmitting RS485 control data and a RG59 core for the video signal. Like all our cables we use quality materials to give you the best picture quality.

**Low-cost eyeball with RS485 control**

**PTZ Combo Cable**  
**150m Roll**  
 Product Code: CAB060
