

Question: How can I quickly identify my tools?

Answer: When you're busy installing CCTV, finding the right tool can be difficult to spot. Colour coding is a handy way to spot which tool you need at a glance.

If you're busily working away with a mound of tools around you it can be difficult to quickly spot the tool you need. It's also easy to lose track of tools when working outdoors or with little light.

The following tips will make it easier to identify your tools at a glance.

Colour Coding

Spray painting your tools different colours is a quick and effective way to set them apart.

You may choose to code them by size, style or by which set they belong to.

This is especially effective on tools such as spanners where the difference in sizes can be hard to spot straight away.

Glow In The Dark

When working at night or in confined spaces where light is limited it's easy to lose or misplace your tools.

Simply painting the handles of your tools with glow in the dark paint can help you keep track of them.

This CCTV installation tip is aimed at helping you to install CCTV equipment. If you are looking for answers on "how to fit CCTV" or perhaps "how to network a DVR or NVR" or even "how to get CCTV on your mobile phone" why not check out our full range of CCTV installation tips at: www.systemq.com
