2.8-12mm Eyeball with Motorised Lens

SEE850

SEE850

The SEE850 is a multi-format HD eyeball camera with Multi-Technology outputs, a motorised lens and high powered IRs. It has TVI, AHD and CVI mode selection plus a separate output for analogue (CVBS) use.

Special Features

In HD-TVI mode, the cameras have the Coaxitron Control facility for changing the OSD menu specifications via the DVR or remote network connection or via the camera. The motorised lens facility allows zoom and focus control to be altered remotely without the need for site access.

This camera also has the NiteDevil menu feature for reducing shutter speed for improving light capture at night.

If you have fitted cameras with IRs and have experienced condensation issues or IR flare, then this camera reduces these problems considerably thanks to flat dual front glass.

Mounting the Camera

The camera is for indoor or outdoor use and can be mounted on a wall, ceiling or under a lintel.

1 First disconnect the base from the camera by unscrewing and removing the securing plate.

2 Secure the base with screws using the 4 screw holes in the base

3 Adjust the eyeball camera and cover to ensure that the correct view is achieved and refit the securing plate.

The camera is IP66 rated and suitable for outdoor use.

Features

- Motorised 2.8-12mm Lens
- Quad Technology
- 2 High Power IRs - Up to 35m Range
- True Day/Night IR Cut Off Filter
- UTC and Co-axitron Control
- Weatherproof IP66 Rated Metal Body
- Extra Deep Base Option
- HD 1080P
- Switchable Video Output
- Gloss Black or Pure White Colour Options

Specification

SEE820B

Powering the Camera

The SEE850 requires a 12V DC 500mA regulated power supply minimum when IRs are on, and power consumption is rated at 6 watts. It should be noted that extra headroom is required when the camera is first powered up so we recommend connecting it to a 12V DC regulated 750mA power supply minimum.

The camera is provided with a fly lead with a mini power 2.1mm DC socket. The camera is also polarity sensitive so connections must be made correctly.

Connecting the Camera to Control Equipment

The dome camera comes with a fly lead for power, TVI/AHD/CVI/CVBS selected BNC video output, plus a second analogue (CVBS) video output on separate BNC lead. Connect the HD camera to control equipment via female BNC-BNC lead. When using a co-ax type cable such as RG59 or similar, the outer braid of the co-ax provides the "0V GROUND" connection and the inner core provides the "Video" connection. The separate analogue (CVBS) output is primarily available for setup purposes but can be used for viewing via an analogue monitor. Note that you cannot use both analogue outputs together but can view one analogue on one HD.

These cameras can be viewed in TVI, AHD, CVI and CVBS.

First power the camera up when it is connected to a monitor or DVR and monitor and see if the required format displays a colour picture. If not, or if it's in black and white, press the joystick button in and *not* down for 3 seconds. Repeat until picture displays in colour. (*Note that the picture may be in black and white in low light levels, or the cellophane lens cover has not been removed*).

Switch Cycle

Alternatively, you can change the camera format in the menu:

Example - Change the camera format to TVI:

<System> <Output> <MAIN OUTPUT ANALOGUE OUT0

<System> <Output> <ANALOGUE OUT0 TVI ↵

When you are in the correct format, press the joystick button in momentarily if you wish to access the menu.

Automatic Zoom and Focus

This camera has an automatic zoom and focus. If you want to manually set the zoom and focus, enter the menu and select '*2-MOTOR*' and change '*AF Mode*' to manual. Exit and Save changes. Now you can use the camera joystick or DVR PTZ controller to manually zoom and focus. Alternatively you can enter the '*2-MOTOR*' menu and change '*AF Mode*' to manual and then use the '*ONEPUSHAF*' option to automatically focus but leave the camera in

manual mode so that the settings do not change.

If you are experiencing out of focus problems in auto mode, this can be overcome by changing the SCANNING option from '*Half Scan*' to '*Full Scan*' to ensure the correct focus point is always detected.

Menu Access via TVI DVR using Coaxitron

Access to the camera menu is via the menu buttons on the camera or via the 'Up the Co-ax' connection. Access by the menu buttons is described below. To use the 'Up to Co-ax' connection, it can be accessed using the PTZ menu in the MEGA TVI or MAX TVI DVRs using the AlienTVI(Coaxitron) protocol. This protocol is generally set in the PTZ Settings menu as default but if not, select using the following:

Enter the DVR 'Menu', click on 'Video', 'PTZ' and *select the channel* number of the TVI camera connected to the DVR.

Then click on 'PTZ Settings' and select 'AlienTVI(Coaxitron) and click 'OK'.

Now click on the 'PTZ' button at the bottom of the screen and a full screen picture will be displayed with the PTZ control menu. Click on the 'IRIS+' button to display the menu.

Use the directional arrows to move up and down or left and right to select options.

OSD Menu

The SEE850 has an onscreen display menu. This can be accessed using the joystick on the camera.

Press the centre button straight down (see arrow) to enter the menu and use Left, Right, Up and Down to move through and amend menu settings.

Alternatively use the TVI DVR PTZ menu as detailed in 'Menu Access via DVR' above.

The following menu display is shown:

Menu Description

The following menu description gives more in depth information about the menu options. In some instances, recommendations are made to hopefully enhance the results. However, every installation will be different and there will be occasions where an alternative solution may be more suitable.

LENS	ELC	Electronic Light Control - Measures Overall Brightness
	ALC	Auto Light Compensation - Measures Peak Light Levels

ELC - Electronic Light Control - measures overall brightness of the picture and applies to manual iris lens

ALC - Auto Light Compensation - measures peak light levels and applies to auto iris lens

*Recommend setting Lens to ALC mode.

Features

- **Motorised 2.8-12mm Lens**

This symbol on the products and/or accompanying documents means that used electronic equipment must not be mixed with general household waste. For treatment, recovery and recycling please return this unit to your trade supplier or local designated collection point as defined by your local council.

WEE/CG0783SS

2-MOTOR↵	AF MODE	Auto/Manual
	SCANNING	Half/Full
	ONEPUSHAF	On(Push) Press IRIS+ or joystick centre button down
	SYNC TDN	On/Off
	INITIAL	On(Push) Press IRIS+ or joystick
	RETURN	centre button down

Two motors are fitted in this camera. One driving the zoom and focus and the other operating the cut filter for True/Day Night operation. If you want to manually set zoom and focus you will need to enter the camera menu by either using the menu buttons on the camera or pressing IRIS+ using the PTZ option in the DVR and switch 2-MOTOR to manual. Then Exit and Save Changes. Then use the PTZ option in DVR pressing the Zoom and Focus adjustments manually.

AF Mode   Auto/Manual

By default the camera is set to Auto. This allows the camera to auto focus. If you want to set the focus control manually, select manual mode and Exit/Save menu and then use the DVR PTZ controller Zoom and Focus controls

SCANNING   Half/Full

The scanning option can be set to Half for quick action auto scan or Full for full scan. You will see the camera movement on full scan takes twice the time of a half scan but full scan is needed when there are a number of focus points to be considered. Out of focus issues are often resolved by changing to full scan.

ONEPUSHAF   On(Push)

Hold down IRIS + button or joystick centre button to initiate an auto focus scan. This also works when the AF Mode is set to manual.

SYNC TDN   On/Off

True day night provides the best method for night time viewing. The cameras are fitted with a cut filter that syncs with the internal IR to provide the most effective way for picture quality, day and night.

INITIAL   On(Push)

Hold down IRIS + button or joystick centre button to return to manufacturer's settings

WEE/CG0783SS

EXPOSURE⏎	BRIGHTNESS SHUTTER	1 ~20 Auto-Normal/Deblur Manual - 1/25,1/50,1/100,1/200,1/400, 1/800, 1/1600, 1/3200, 1/6400, 1/12800, 1/25600 Flicker
	SENS-UP AGC RETURN	Off/x2/x4/x8/x16/x32 1~20

BRIGHTNESS   1 ~ 20 (Default = 10)

Use this setting to increase brightness by opening camera iris. Useful for improving night time viewing by using in conjunction with the Sens-Up option. However be aware to consider possible effects when there is strong sunlight that if setting brightness to high it may cause the picture to white out.
Recommendation is to set brightness to 15

SHUTTER   Auto/Manual

1/25, 1/50, 1/100, 1/200, 1/400, 1/800,

1/1600, 1/3200, 1/6400, 1/12800, 1/25600,

Flicker

Shutter speed changes allow you to freeze moving objects without ghosting but reduce the amount of available light the faster the shutter operates. At night the slower the shutter speed the more light is available. The Flicker option sets the shutter speed at 1/250 that synchronises with fluorescent tubes so that the pulsing effect is minimised.
Recommendation is to leave this in Auto.

SENSUP   Off/x2/x4/x8/x16/x32

The SensUp option allows the shutter speed to be reduced allowing additional light to be captured. Increasing brightness helps night time viewing (see BRIGHTNESS setting above). If set too high and Sensup is slowing shutter speed down to a lower speed than any movement speed, ghosting can occur. *Recommend that Sensup is switched on to x2 for areas with some light at night to x16 when pitch black.*

AGC   1 ~ 20 (Default = 10)

For better performance in low light conditions the AGC (Automatic Gain Control) can be increased. This has the effect of making the picture brighter but it may also add more noise as it amplifies all aspects of the video signal.
Recommend AGC is decreased below 10 if Sensup is increased over x2.

SEE820B

BACKLIGHT	OFF HLC↵	Level 1 ~ 20 / Colour - BLK/Customise/WHT/YEL/CYN/GRN/MAG/RED/BLU
	BLC↵	H-Pos - V-Pos - H-Size - V-Size - Return
	WDR↵	Weight-Low/Middle/High - Return

Backlight Compensation, when set, can balance light levels during day and night so that light hitting objects viewed is evenly spread across the picture. There are 3 options: HLC, BLC and WDR that can be selected.

HLC↵

(High Level Backlight Compensation)

Level 1 ~ 20/Mode - All Day/Night Only

HLC is high level backlight compensation that will darken a bright area e.g car headlights. This can be set for all day or night only. The lower the level the more compensation is applied. Note that using the night option may be best as daytime pictures generally give a more even spread of light apart from sunlight issues. *Recommend only to use on Night Only if bright lights are causing complete video loss.*

BLC↵

(Backlight Compensation)

H-Pos - V-Pos - H-Size - V-Size

BLC is the standard setting for low level light differences. Select an area where BLC is required. Using the H-Pos (Horizontal Position) and V-Pos (Vertical Position) followed by H-Size (Horizontal Size) and V-Size (Vertical Size) create a box where light balancing is required.

WDR↵

(Wide Dynamic Range)

Weight - Low/Middle/High

WDR is used for surveillance applications where there is a large difference in foreground and background light levels. This is typical in homes and office buildings that have large areas of glass with direct sunlight outside. Without the option switched on, views by cameras looking through windows may not give good reproduction outside. Also where there are areas of shadow and bright sunlight, the WDR option helps to balance light levels. *Recommend using WDR where balancing light levels in warehouses or large buildings is difficult.*

Day & Night menu controls light settings and predominantly provides options for using the cameras Infra-Red facilities. There are four sub-options namely External, Auto, Colour and Black & White.

EXTERNAL↵

This option does not use the internal CDS sensor to measure the available light. With cameras using their own IR light source, this option can give the best results. Note that this option has a manual adjustment for setting IR switch on according to lux level from day to night and from night to day, plus an option for applying a delay factor. This stops switching until a pre-determined lux level remains constant. There is also the option to switch off the IRs. *Recommend to try this option first but switch to Auto if not getting required results.*

AUTO↵

The standard Auto function uses the internal CDS to measure available light. This uses AGC (Automatic Gain Control) and Anti Saturation to measure picture quality before switching which is used in conjunction with a pre-determined time interval when lux levels remain constant. There is also the option to switch off the camera IRs. Probably best option to use if this is the only source of light at night.

COLOUR

This option will remain in colour mode day and night. There are no sub menu settings. This will only be applicable when light levels at night allow the camera to continue working at 4 lux or higher.

B&W↵

When this option is selected the camera will remain in black and white mode, day and night.

		  B-Gain 1 ~20 (Default 10)
		  Return

This feature automatically adjusts the colour settings in the camera to match the type of light available, so that white and other colours appear as natural as possible.

AUTO

This option automatically sets white balance.

AUTOext

This option is generally used to set white balance when the camera is used externally.

PRESET(Push)   Press IRIS+ or joystick centre button down

This option allows you to set white balance using current light levels. Settings will only change when you press IRIS+ or joystick centre down.

MANUAL↵

Use this option to manually balance light levels. Note that the manual option is used for a static light environment and generally suitable for cameras installed indoors using constant artificial light.

C-Temp 5000K/8000K/3000K

R-Gain 1 ~ 20 (Default 10) Sets Red Gain

B-Gain 1 ~ 20 (Default 10) Sets Blue Gain

DIGITAL NOISE REDUCTION	DNR	Off/Low/Middle/High

DNR   Off/Low/Middle/High

Digital Noise Reduction is generally applied when the Sens-Up feature is used to improve night time views in low light conditions. Using the Sens-Up option slows the shutter speed but this increases noise and causes grainy picture effects. DNR helps to minimise this effect. The options low, medium and high, apply different levels of noise reduction and therefore have to be tested to gain the best result as light levels will be different at every site and location. *Recommend to leave off even when Sense-Up is on. If grainy picture is created then test starting on low and leave camera on the best setting.*

IMAGE⏎

The Image menu covers a variety of options including sharpness, mirror, defog, shading and privacy masking facilities.

Sharpness   1 ~ 10

Depending on the camera format selected, the format/s will be in dark type for adjustment.

The sharpness control is done by digital correction and the best way to set this option is to set level to maximum of 10, then flick back to 1, to see the difference. Then adjust to display sharpest picture without displaying heavy black lines around subjects.

Gamma   0.55/0.65/0.75/0.45 (Default 0.55)

Gamma correction controls and adjusts the overall brightness of an image. *Recommend trying each option and select the best quality picture.*

Mirror   Off/On

This option changes a left handed view to a right handed view if switched on.

Flip   Off/On

This option turns a view upside down. This option is generally used with the Mirror function.

ACE   Off/On/Middle/High

Adaptive Colour & Contrast Enhancement (ACE) is an automated option for adjusting colour and contrast as light levels change throughout the day. Low, middle or high options are available. *Recommend setting option to Low.*

DEFOG↵   Off/On↵

Mode - Auto -   Level - Low/Middle/High

Manual - Level - Low/Middle/High

The defog option can be used to improve the captured image in poor weather conditions such as smog, fog or smoke. Three levels of optimisation can be applied, low, middle or high. This option is useful to stabilise rapid fluctuating light levels. *Recommend setting this option to On.*

PRIVACY   Off/On↵

Zone Num (0~15)

This function allows the creation of up to 16 coloured areas to be created to provide privacy masking.

Done Disp Off/On

The Zone Display allows you to switch on and off the zone number.

H-Pos/V-Pos/H-Size/V-Size

Each area can be positioned using the H-Pos (Horizontal Position), V-Pos (Vertical Position) and sized using the H-Size (Horizontal Size) and V-Size (Vertical Size) options. The Zone Display allows you to switch on and off the zone number.

Y-Level (1~20)

CR Level (1~20)

CB Level (1~20)

The Y-Level is the colour hue for privacy masking and the CR Level (Chrominance Red) and CB Level (Chrominance Blue) are used to create the required colour.
