... sees in the dark, in colour !

Also in grey

The all new NiteDevil® 24C can stay in full colour around the clock using the minimal amount of natural light to produce superb full colour images. It really is a game changer in performance and should be used as a part of any CCTV system requiring full colour images in key areas around entrances etc.

With built in dual IR and white light you can choose how the camera best works in your install. Using white light to give visual warning or using IR illumination to get a more discreet set up.

A built in microphone means you can see and hear what's happening, recording the audio & video on your NVR for the best possible CCTV evidence.

NiteDevil® Technology in Action! (images for guidance only)

Normal IR Camera

NiteDevil® Camera

use the 12V input or a PoE injector such as our POE200 (see pg 118).

Dual PoE and 12V means you can power and connect the camera to POE NVRs in seconds using one simple CAT5/6 cable for video, power and audio. If your system doesn't support PoE

Using the superb NiteDevil® 24C with our ZIP NVRs means installs are effortless and child's play, the auto-configure means the NVR will pretty much do all of the work for you.

The wide angle 3.6mm lens means you get a 90 degree field of view capturing all the footage you need and no lens to focus as we have already done that for you.

All in all, with a choice of bracket options the NiteDevil® 24C is a real winner for CCTV professionals to get the very best out of the CCTV installs and great customer satisfaction with 24-7 full colour images.

Bracket options below!
